

Save time and money with SIMONA PMC OneStep® solution for vinyl-wrapped parts

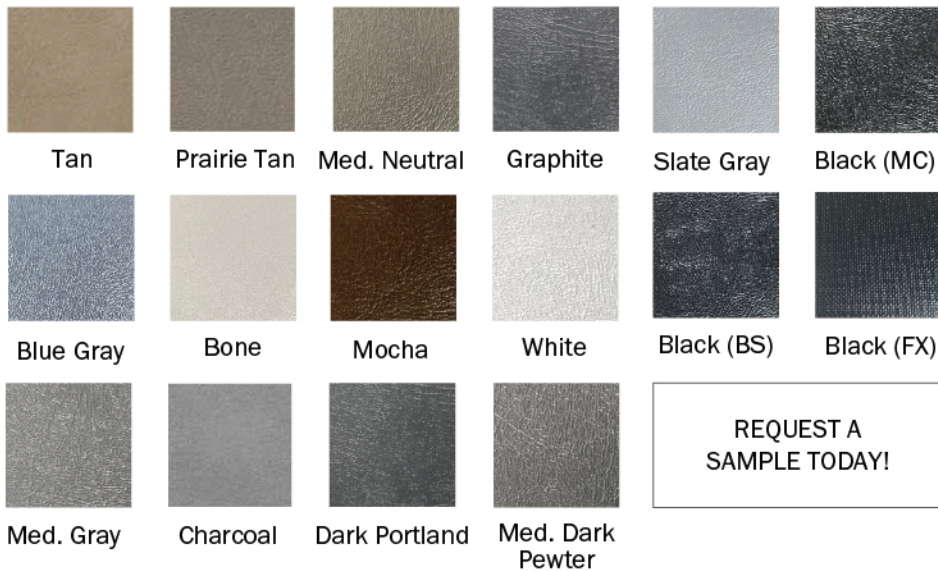

Introducing the **SIMONA PMC OneStep® Vinyl/ABS sheet system**. This unique, thermoformable sheet is made up of a vinyl foam composite with a leather texture, laminated over ABS to create a piece that mimics typical hand-wrapped parts. **This innovative material can drastically decrease your production time and labor by eliminating the step of hand-wrapping vinyl over a thermoformed part.** While maintaining dependable performance for forming applications, it retains the durability and rigidity to withstand wear and tear and is near impervious to scratches and marring.

Vinyl/ABS is like a high-performance leather. It has a sophisticated look and feel while also providing the lasting durability required for a high-performance lifestyle and long lifetime of application.
